

GPUProfiler and Display basic flow

This is the essential process that triggers the GPUProfiler to run.

NOTE:

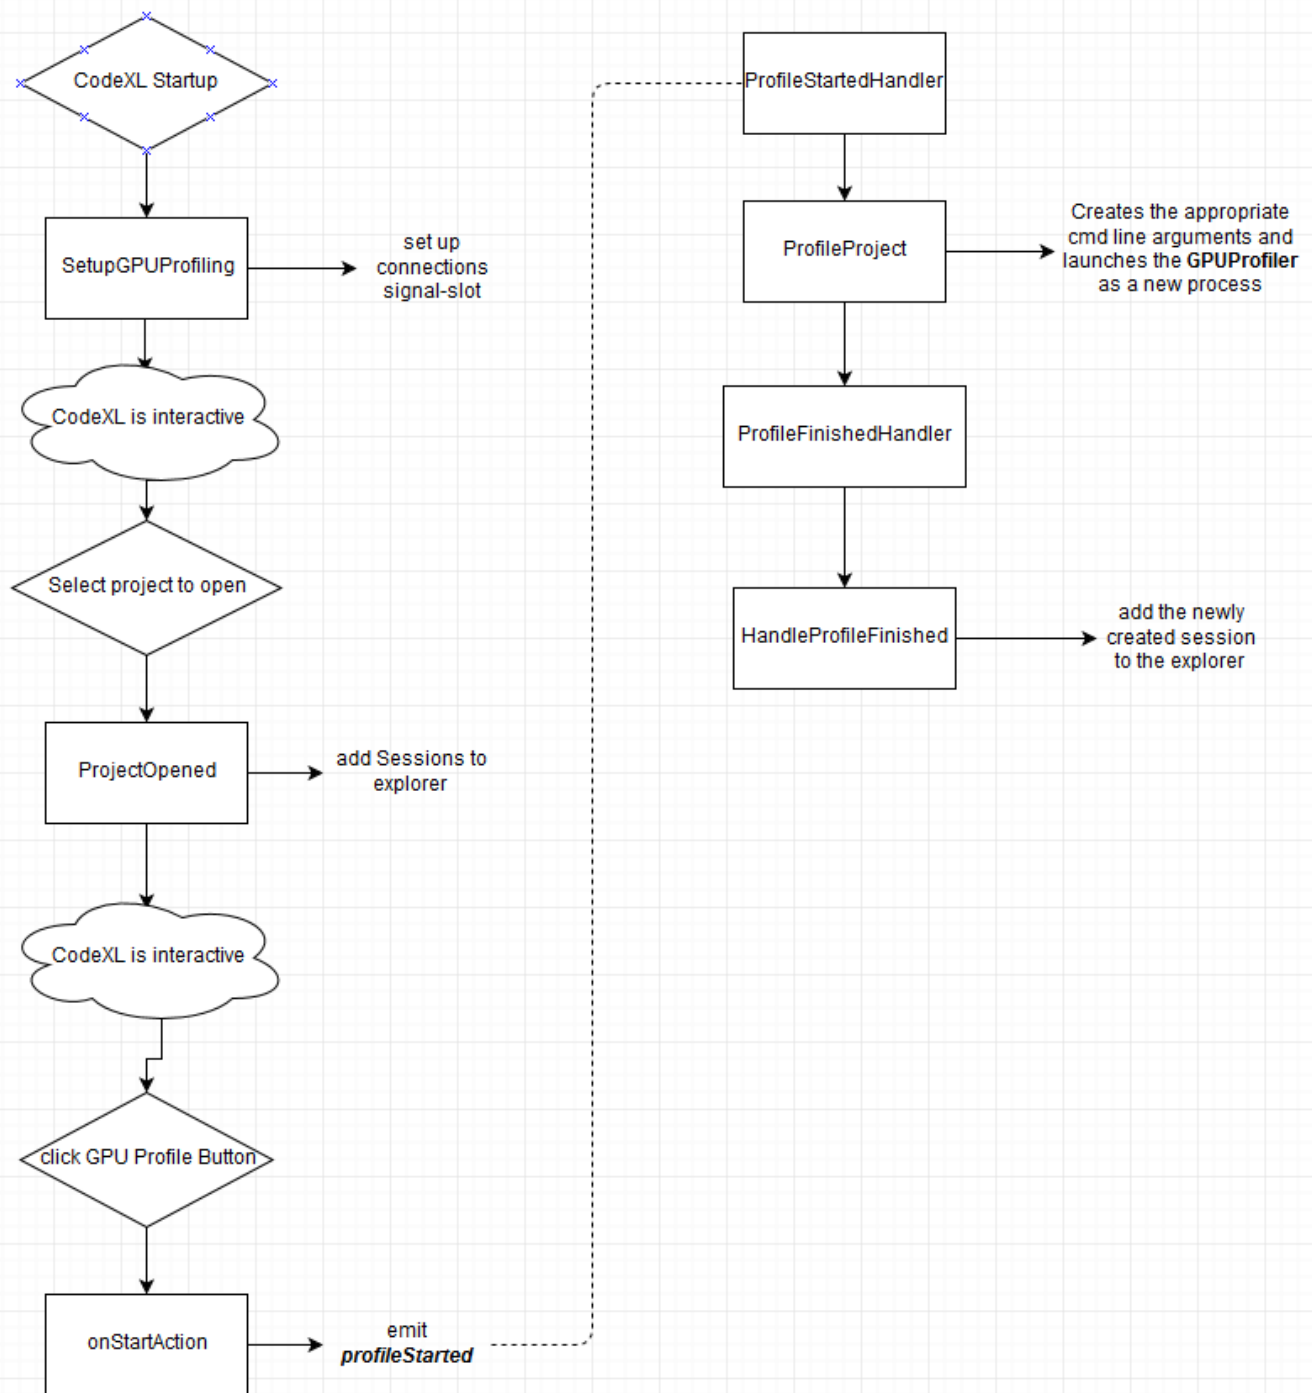

Diamonds indicate user actions

Rectangles indicate Function calls (relevant to us). Text indicates relevant actions

Clouds indicate CodeXL state.

ProfileProject calls LaunchProfilerServer and spins [GPUProfiler](#) as a new process.

the ***profileStarted*** signal is connected to the ***ProfileStartedHandler*** slot in SetupGPUProfiling

This is the essential process that triggers the parsing of the atp file and creation of the session view
